the best type of thermometer or the best place to insert the thermometer in some cases depends on your child's age. Birth to 3 months should be used when the child is under 3 months old. In cases where the child is older, an oral or underarm thermometer should be used. The correct method of insertion varies depending on the type of thermometer.

**Infectious Mononucleosis**

Infectious mononucleosis (IM), also known as glandular fever, is an infection usually caused by the Epstein-Barr virus (EBV). Most people are infected by the virus as children, and the disease often results in fever, sore throat, enlarged lymph nodes in the neck, and tiredness. In young adults, the disease often results in fever, sore throat, and enlarged lymph nodes in the neck, and tiredness. In young adulthood, when the disease produces few or no symptoms in young adults, the disease often results in fever, sore throat, and enlarged lymph nodes in the neck, and tiredness.
