Paul Anthony Samuelson, born May 15, 1915 and died December 13, 2009, was an American economist who was the first American to win the Nobel Memorial Prize in Economic Sciences when awarding the prize in 1970. The Swedish Royal Academies stated that he has done more than any other contemporary economist to raise the level of scientific economics.

Samuelson's contributions to economic theory include the Samuelson-Swan diagram and his work on the theory of index funds. He also developed important work in the fields of urban economics and industrial economics.

One of his most notable contributions was the SAM (System of National Accounts) model, which is used to measure the performance of an economy. His work in this area helped to establish the field of macroeconomics as a distinct area of study.

Index funds are mutual funds or exchange-traded funds (ETFs) designed to track the performance of a particular market index, such as the Standard & Poor's 500 (S&P 500). They are often used by investors who want to achieve the risk and return characteristics of a particular market segment with minimal management effort.

October 17, 2022, Paul's father was Paul A. Samuelson, a Nobel laureate in economics whose work inspired Vanguard founder Jack Bogle's creation of the first index mutual fund available to the general public. Reaganomics is a portmanteau of Reagan's economic policies.
and economics attributed to Paul Harvey or Reaganism refers to the neoliberal economic policies promoted by US President Ronald Reagan during the 1980s. These policies are commonly associated with and characterized as supply side economics, trickle-down economics, or voodoo economics. Stagflation or recession inflation is a situation in which the inflation rate is high or increasing, the economic growth rate slows, and unemployment remains steadily high. It presents a dilemma for economic policy since actions intended to lower inflation may exacerbate unemployment. The term a portmanteau of stagnation and inflation is web academic literature on public goods. Paul A. Samuelson is usually credited as the economist who articulated the modern theory of public goods in a mathematical formalism building on earlier work of Wickhiss and Lindahl. In his classic 1954 paper, the pure theory of public expenditure, he defined a public good or, as he called it in the paper, a collective good. Paul Samuelson and William Nordhaus, in their 18th edition of their book, say that economics is the study of how societies use scarce resources to produce valuable goods and distribute them among different people. The Stolper-Samuelson theorem is a basic theorem in Heckscher-Ohlin trade theory. It describes the relationship between relative prices of output and relative factor rewards, specifically real wages and real returns to capital. The theorem states that under specific economic assumptions, constant returns to scale, perfect competition web nov 07 2008, the Graduate School of Design educates leaders in design research and scholarship to make a resilient just
